

ABSTRACT OF DISCLOSURE

A carrying apparatus with adjustable over the shoulder straps as well as hand-carry straps which are attached to a free-forming fabric sling platform by sewing. A pair of inverted, separating zippers are sewn along opposite edges of the sling platform to provide a simple means of converting the apparatus from a closed-end bag, to a sling with partially closed, to a fully separated end(s), to accommodate a variety of cargo shapes and sizes. When not in use, the invention can be easily folded to about double the size of a mans' large wallet and secured with its' own elastic strap.
